AB ***CBP*** histone ***acetyltransferase*** acetylates
Importin . ***alpha*** ., affecting ability of ***Importin***
. ***alpha*** . to translocate into the nucleus and import a cargo
protein. Assays identify substances which modulate interaction between
CBP and ***Importin*** . ***alpha*** . and acetylation of
Importin . ***alpha*** . by ***CBP*** . Substances
identified in the assays are useful for treatment of disorders in which
Importin . ***alpha*** . plays a role.

AB Histone ***acetylases*** were originally identified because of their
ability to acetylate histone substrates [1] [2] [3]. ***Acetylases***
can also target other proteins such as transcription factors [4] [5] [6]
[7]. We asked whether the ***acetylase*** CREB-binding protein (
CBP) could acetylate proteins not directly involved in
transcription. A large panel of proteins, involved in a variety of
cellular processes, were tested as substrates for recombinant ***CBP***
. This screen identified two proteins involved in nuclear import, Rch1
(human ***importin*** - ***alpha***) and importin-alpha7, as targets
for ***CBP*** . The acetylation site within Rch1 was mapped to a single
residue, Lys22. By comparing the context of Lys22 with the sequences of
other known substrates of ***CBP*** and the closely related
acetylase p300, we identified G/SK (in the single-letter amino
acid code) as a consensus acetylation motif. Mutagenesis of the glycine,
as well as the lysine, severely impaired Rch1 acetylation, supporting the
view that GK is part of a recognition motif for acetylation by ***CBP***
/p300. Using an antibody raised against an acetylated Rch1 peptide, we
show that Rch1 was acetylated at Lys22 in vivo and that ***CBP*** or
p300 could mediate this reaction. Lys22 lies within the binding site for a
second nuclear import factor, importin-beta. Acetylation of Lys22 promoted
interaction with importin-beta in vitro. Collectively, these results
demonstrate that acetylation is not unique to proteins involved in
transcription. Acetylation may regulate a variety of biological processes,
including nuclear import.
